

AZURE AI SERVICES YOU CAN USE

When creating AI-driven applications, the following Azure AI services are available:

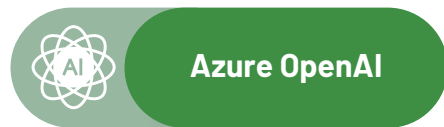

Combine generative AI models with tools that let agents connect to and interact with real-world data sources.

Run inference for flagship models available in the Azure AI model catalog.

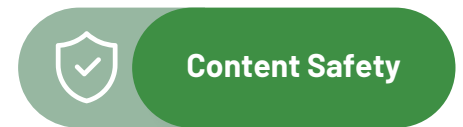

Add AI-powered search capabilities to your mobile and web applications.

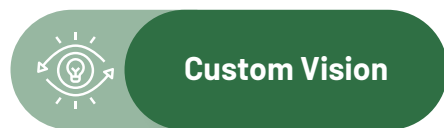

Perform a wide range of natural language tasks using OpenAI models.

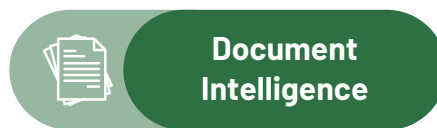

Build and connect intelligent bots across multiple channels.

Detect and filter harmful or inappropriate content with AI.

Train and customize image recognition models for your business needs.

Transform documents into actionable, data-driven insights.

Identify and recognize people and emotions within images.

Assist users in reading and understanding text more easily.

Build applications with advanced natural language understanding (NLU).

Convert speech to text, text to speech, translate, and recognize speakers.

Translate across 100+ languages and dialects with AI-powered translation.

Extract meaningful insights from video content.

Analyze and interpret images and videos with AI.
